Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet
-- but bad policies allow companies like AT&T and Verizon to
shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the
700MHz spectrum auction to create an open network that gives
consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive
wholesale marketplace.
3. The freedom to access any content or services we want through
our devices.

Sincerely,

Gene Stewart
115 Mill Creek Drive
